

Design and Technology

Through our Design and Technology Curriculum, children will participate in projects that are relevant to their everyday lives, for example, related to their home, topic, school grounds and the environment.

Children are given the opportunity to develop the creative, technical and practical skills needed to perform everyday tasks confidently. They are encouraged to take risks and to work constructively and productively with others, carry out research, build upon their repertoire of knowledge, show initiative and ask questions. They will use a range of media, tools and materials to design and make their own products in a safe, healthy and hygienic way. Evaluating and testing products (of the children's own design or others) is also an important aspect of Design and Technology that children will experience at Stephen Freeman School.
